1 Introduction

For a complex number s , we consider the series.

$$\zeta(s) = \sum_{n=1}^{\infty} \frac{1}{n^s} \quad (1)$$

Theorem 1.1. *Consider the analytic continuation of the Riemann zeta function defined in Equation 1. All the non-trivial roots of it lie on the $\text{Re}(s) = \frac{1}{2}$ line.*

2 Plotting graphs
